AND MOTOR VEHICLES

# Traffic Crash Facts 2002

A Compilation of Motor Vehicle Crash Data from the Florida Crash Records Database

Office of Management Research  
and Development

# 2002 FLORIDA TRAFFIC CRASH STATISTICS

Traffic crashes .....	250,470
Drivers Involved .....	371,887
Average crashes per day .....	686
Mileage Death Rate (per 100 million VM) .....	1.8
Fatalities .....	3,143
Fatal crashes .....	2,816
Injuries .....	229,611
Injury crashes .....	142,992
Property damage only crashes .....	104,662
Alcohol-related fatalities .....	1,007
Alcohol-related injuries .....	16,864
Alcohol-related crashes .....	21,533

Alcohol-related fatal crashes .....	894
Alcohol-related injury crashes .....	10,385
Pedestrians killed .....	484
Pedestrians injured .....	7,447
Pedestrian crashes .....	8,060
Bicyclists killed .....	108
Bicyclists injured .....	4,970
Bicycle crashes .....	5,380

Motorcyclists killed .....	274
Motorcyclists injured .....	5,384
Motorcycle crashes .....	5,972

**NOTE:** In 2002, vehicle miles driven increased by 7.7 billion and registered motorcycles increased by 35.5 percent. The mileage death rate remained at 1.8 per one hundred million vehicle miles driven.

October 29, 2003

Dear Reader:

I am pleased to present the *2002 Florida Crash Facts Report*. This report contains data from the Department's crash database, compiled from traffic crash reports completed by state and local law enforcement agencies.

In 2002, Florida continued to see improvements in traffic safety. Statewide, the number of traffic crashes reported and investigated was down 2.2 percent from 2001. Alcohol-related fatalities, as a percent of total fatalities, decreased by 1.2 percent. The mileage death rate remained at 1.8 per one hundred million vehicle miles traveled, even with a significant increase of 7.7 billion in the number of vehicle miles driven on Florida's highways.

In the aggregate, crash statistics provide a comprehensive understanding of highway safety issues and assist in the development of education and enforcement programs in targeted areas. However, each statistic represents an individual story, ranging from a minor inconvenience to a major life-changing tragedy. Safety on Florida's highways affects all Floridians, and we must continue to strive to reduce the needless deaths and injuries on our highways.

On behalf of the Department, I extend appreciation and recognition to the law enforcement officers who, in addition to responding to the immediate needs of crash victims on the scene, also collect vital crash data that helps make highways safer in the future for Floridians, visitors, and their families.

Sincerely,

A handwritten signature in black ink that reads "Fred O. Dickinson".

Fred O. Dickinson  
Executive Director

**"Safety on Florida's highways affects all Floridians, and we must continue to strive to reduce the needless deaths and injuries on our highways."**

*— Fred O. Dickinson, Executive Director*

# SOURCE OF DATA

The information contained in this *Traffic Crash Facts* booklet is extracted from law enforcement agency long-form reports of traffic crashes. A law enforcement officer must submit a long-form crash report when investigating:

- Motor vehicle crashes resulting in death or personal injury, or
- Motor vehicle crashes in which one or more of the following conditions occur:
  - Leaving the scene involving damage to an attended vehicle or property (Section 316.061 (1), F.S.), or
  - Driving while under the influence of alcoholic beverages, chemical substances, or controlled substances or with an unlawful blood alcohol level (Section 316.193, F.S.).

An investigating officer may report other traffic crashes on the long-form crash report. In particular, applicable statutes specify an officer's discretion to submit a long-form report in crashes where a vehicle is rendered inoperable to the degree that a wrecker is required to remove it from traffic.

Statutory revisions in 1983 and 1989 reduced the number of non-injury crashes required to be reported to the Department. Any presentation of historical data that includes such crashes, such as total traffic crash counts, will reflect these changes. Data on traffic crashes involving death, injury, or other criteria for law enforcement long-form reports as outlined above are not affected.

# DEFINITION OF TERMS

The following terms are defined as they apply to the crash data presented in this publication.

These definitions may differ from legal or other uses of the same terms.

## Alcohol-related traffic crash

A crash involving a driver and/or pedestrian for whom alcohol use was reported (does not presume intoxication).

## Bicycle

A vehicle propelled solely by human power or a motorized bicycle propelled by a combination of human power and an electric helper motor rated at 200 watts or less (this term does not include a vehicle with a seat height less than 26 inches from the ground when the seat is adjusted to its highest position, or a scooter or similar device).

## Bicyclist

The driver of a bicycle. A passenger on a bicycle is considered a vehicle passenger.

## Driver

Unless otherwise indicated, the operator of a motor vehicle or bicycle. Driver data typically exclude uninjured persons presumed to have been operating hit-and-run, phantom, or properly parked vehicles.

## Fatal traffic crash

A traffic crash that results in one or more fatalities within thirty days of occurrence.

## Harmful events

Identifies the first and subsequent harmful events for each vehicle in a traffic crash.

## Injury

Hurt, damage, or loss sustained by a person as a result of a traffic crash.

## Possible injury

No visible signs of injury but complaint of pain or momentary unconsciousness.

## Non-Incapacitating injury

Any visible injuries such as bruises, abrasions, limping, etc.

## Incapacitating injury

Any visible signs of injury from a crash or person(s) who had to be carried from the scene.

## Total injury

The sum of possible, non-incapacitating, and incapacitating injuries.

## Injury crash

A non-fatal traffic crash that results in one or more injuries.

## Moped

A motor-powered cycle with a pedal-activated motor and a maximum of two brake horsepower.

## Motor vehicle

Any motorized vehicle not operating on rails.

## Motorcycle

A motor vehicle, with a seat or saddle for the driver's use, traveling with no more than three wheels in contact with the ground, excluding a tractor or a moped.

## Motorcyclist

The driver of a motorcycle. A passenger on a motorcycle is considered a vehicle passenger.

## Vehicle and/or Property damage only crash

Loss of all or part of an individual's vehicle and/or property resulting from a traffic crash not involving injury to a person.

## Traffic crash

A crash involving at least one motor vehicle on a roadway that is open to the public.

## Traffic fatality

The death of a person as a direct result of a traffic crash within thirty days of the crash occurrence.

## Vehicle occupants

Drivers and passengers of automobiles, vans, trucks, buses, and motor homes.

## Long form

Refers to a crash report prepared by a law enforcement officer where there has been a crash resulting in bodily injury, the death of a person or where a specified criminal offense has been committed.

## Short form

Refers to a crash report in which the threshold of the long form does not apply. Therefore, a long form report is not prepared. In crashes where apparent damage is less than \$500, the law enforcement officer shall provide each party involved in the crash a short form prescribed by the state, to be completed by each party or the parties.

# STATE OF FLORIDA SUMMARY

## ALL CRASHES

Compared to 2001, there was a 2.2% decrease in traffic crashes investigated and reported.

Traffic crashes .....	250,470
Drivers involved.....	371,887
Average crashes per day .....	686

## FATAL CRASHES AND FATALITIES

Compared to 2001, there was a 4.3% increase in traffic fatalities.

Fatalities .....	3,143
Fatal crashes .....	2,816

## INJURY CRASHES

Compared to 2001, there was a 2.1% decrease in traffic injuries.

Possible injuries.....	122,447
Non-incapacitating injuries .....	76,643
Incapacitating injuries .....	30,521
Total injuries .....	229,611
Injury crashes.....	142,992

## ALCOHOL-RELATED CRASHES

### AND FATALITIES

32% of traffic fatalities and 8.6% of traffic crashes were alcohol-related.

Alcohol-related fatalities.....	1,007
Alcohol-related injuries .....	16,864
Alcohol-related crashes .....	21,533
Alcohol-related fatal crashes.....	894
Alcohol-related injury crashes .....	10,385

## CRASH ENVIRONMENTS

60.2% of all crashes occurred primarily in business areas, while 58.8% of fatal crashes were in open country or residential areas.

Crashes in Business Areas.....	150,746
Crashes in Residential Areas .....	72,447
Crashes in Open Country.....	27,275
Fatal Crashes in Business Areas.....	1,161
Fatal Crashes in Residential Areas .....	730
Fatal Crashes in Open Country .....	925

## PEDESTRIAN CRASHES

15.4% of all traffic fatalities were pedestrians.

Pedestrians killed .....	484
Pedestrians injured.....	7,447
Pedestrian crashes* .....	8,060

## BICYCLE CRASHES

3.4% of all traffic fatalities were bicycle drivers.

Bicyclists killed .....	108
Bicyclists injured .....	4,970
Bicycle crashes* .....	5,380

## MOTORCYCLE CRASHES

8.7% of all traffic fatalities were motorcycle drivers.

Motorcyclists killed .....	274
Motorcyclists injured.....	5,384
Motorcyclists crashes .....	5,972

\*Pedestrian and bicycle crashes included all crashes involving pedestrians or bicycles and are not comparable to crashes by the first harmful event as reported in previous editions.

# SAFETY EQUIPMENT USE IN CRASHES

Does not include cases with safety equipment use or injury level not stated.

**TABLE 1**

## Comparative Safety Equipment Use By VEHICLE OCCUPANTS OTHER THAN DRIVERS

VEHICLE OCCUPANTS WITH	No Injury	%	Possible Injury	%	Non-Incapacitating Injury		Incapacitating Injury		Fatal	%	% Total	TOTAL
						%		%				
Safety Belt	63,376	63.75	22,447	22.58	10,264	10.32	3,197	3.22	129	0.13	100	99,413
Belt & Bag (Deployed)	4,463	39.63	3,138	27.87	2,601	23.10	989	8.78	70	0.62	100	11,261
Belt & Bag (Not Deployed)	11,419	60.16	4,704	24.78	2,087	10.99	736	3.88	36	0.19	100	18,982
Air Bag Only (Deployed)	198	19.86	246	24.67	300	30.09	199	19.96	54	5.42	100	997
Air Bag Only (Not Deployed)	480	42.29	279	24.58	218	19.21	134	11.81	24	2.11	100	1,135
Not Using Safety Equipment	20,240	62.13	5,451	16.73	4,255	13.06	2,287	7.02	346	1.06	100	32,579
<b>TOTAL</b>	<b>100,176</b>		<b>36,265</b>		<b>19,725</b>		<b>7,542</b>		<b>659</b>			<b>164,367</b>

Sixty-six percent of drivers using safety belts avoided injury (TABLE 1) compared to 48.5 percent for those drivers not using safety equipment. For those drivers using safety belts only, non-incapacitating injuries, incapacitating injuries, and fatal injuries were 10.11 percent, 3.28 percent, and 0.13 percent respectively. The corresponding figures for drivers not using safety equipment were 19 percent, 11 percent, and 2.18 percent. The use of safety belts with air bags deployed was more effective than the use of air bags deployed only in preventing injury and reducing both non-incapacitating and incapacitating and fatal injuries. The use of air bags only was the least effective way to avoid traffic injuries because air bags by themselves protect only in frontal crashes. Air bags offer maximum protection when used as supplemental protection for belted front-seat occupants in frontal crashes. For occupants other than drivers, use of safety belts only is more effective in reducing non-incapacitating injuries, incapacitating injuries and fatal injuries (TABLE 1).

**TABLE 1A**

While the use of protective equipment by motorcyclists and their passengers is expected to be more effective in preventing incapacitating and fatal injuries, the inclusion of all types of bodily injuries for motorcyclists and passengers fails to show the true effect of safety helmet use (TABLE 1B). The data for bicyclists and their passengers are more supportive of the use of helmet. However, the independent effect of helmet use again can not be determined due to inclusion of the severity of injury rather than the type of injury in the data collection instrument, where head injuries can be directly related to the use of helmets (TABLE 1C).

**NOTE:** In 2002, registered motorcycles increased by 33.5 percent over 2001 registrations. Injuries reported for motorcyclists and bicyclists include head and other bodily injuries.

# CHILD PASSENGERS AND SAFETY EQUIPMENT

*Does not include passengers of bicycles, motorcycles, buses, or all-terrain vehicles.*

**TABLE 2** CHILD RESTRAINT DEVICE AND SAFETY BELT USE BY AGE

CHILD RESTRAINT USE	Age Group	No Injury		Injury		Fatal		% Total	TOTAL	<i>Sixty-six percent of fatalities in the 6 to 17 year age group were without seatbelts.</i>
		Injury	%	Injury	%	Fatal	%			
With Restraint	<4	7,777	74.93	2,587	24.93	15	0.14	100	10,379	<i>Sixty-six percent of fatalities in the 6 to 17 year age group were without seatbelts.</i>
	4 to 5	3,530	72.62	1,326	27.28	5	0.10	100	4,861	
	6 to 17	22,635	66.95	11,140	32.95	36	0.11	100	33,811	
Without Restraint	<4	605	61.48	370	37.60	9	0.91	100	984	<i>Sixty-six percent of fatalities in the 6 to 17 year age group were without seatbelts.</i>
	4 to 5	402	64.32	219	35.04	4	0.64	100	625	
	6 to 17	8,283	68.89	3,671	30.53	69	0.57	100	12,023	

TABLE 2 shows that 75 percent of children under 4 years of age avoided injuries during traffic crashes because they were properly restrained, compared to 61 percent who were without restraints. Similarly, 73 percent of children within the 4 to 5 age groups escaped injury compared to 64 percent without child restraints. The fatal injury for children under 4 years of age without restraints was 6.5 times higher than the under 4 years of age with restraints. Similarly, the fatal injury for children in the 4 to 5 age group without safety restraints was 6.4 times higher than the same age group with safety restraints.

**TABLE 3**

CHILD PASSENGERS INJURED OR KILLED 1993 THROUGH 2002

Not Stated	0	4,950		29	
<b>TOTAL</b>	<b>14,604,720</b>	<b>348,444</b>		<b>4,013</b>	

TABLE 4 shows the 15-34 years of age group with the highest rate of involvement in crashes, ranging from 277 per 10,000 licensed drivers to 442, with young drivers under age 25 having the highest rate of crash involvement. For the 35-44 age group, the rate drops below 245 per 10,000 licensed drivers and the 65-74 years of age group has a rate of 123 per 10,000 licensed drivers compared to 107 for age group 75-84. The rate for age 85 and over is 93 per 10,000 licensed drivers, which is just below the age group (65-84). Although older drivers perform the least amount of driving, compared to young drivers, reduced vision, slowed reaction, and restricted physical movement contribute to the increase in crash rates for this age group.

**TABLE 5**

## Crash Rates for Florida Resident DRINKING DRIVERS IN ALL CRASHES BY AGE GROUPS

AGE GROUPS	Driver Licenses Issued	Drinking Drivers in All Crashes	Rate Per 10,000 Licensed Drivers	Drinking Drivers in Fatal Crashes	Rate Per 10,000 Licensed Drivers
Under 15	0	8		0	
15-24	1,925,466	3,860	20.05	197	1.02
25-34	2,698,073	3,845	14.25	171	0.63
35-44	2,946,968	3,927	13.33	180	0.61
45-54	2,497,147	2,389	9.57	87	0.35
55-64	1,858,004	896	4.82	28	0.15
65-74	1,396,268	347	2.49	18	0.13
75-84	1,001,499	119	1.19	9	0.09

Not Stated	0	202		3	
<b>TOTAL</b>	<b>14,604,720</b>	<b>15,612</b>		<b>695</b>	

In TABLE 5, the 15-44 age group distinguishes itself from other age groups by a relatively high rate of alcohol involvement in crashes. The rates for alcohol involvement drops dramatically from 9.57 per 10,000 licensed drivers for the 45-54 age group to 0.68 for the 85 and over age group. TABLE 5 further illustrates that young drivers under the age of 25 have the highest rates of fatal crashes involving alcohol. This can be attributed to excessive driving during high-risk and alcohol-prone night hours. Young drivers have a relatively low level of driving experience, and any concentration of alcohol can significantly affect their driving performance. A comparison of drinking drivers in fatal crashes shows that drivers under 45 years of age have the highest rate of involvement in alcohol-related fatalities.

# SELECTED AGE GROUP

Does not include drivers of bicycles, mopeds, ATVs, or trains in "all crashes" and in "fatal crashes" categories on both tables.

**TABLE 6**

## Crash Rates for Florida Resident **DRIVERS** IN ALL CRASHES FOR A SELECTED AGE GROUP (15 - 29)

AGE OF DRIVER	Driver Licenses Issued	Drivers in All Crashes	Rate Per 10,000 Licensed Drivers	Drivers in Fatal Crashes	Rate Per 10,000 Licensed Drivers

82	83,958	857	102.07	18	2.14
83	70,190	770	109.70	17	2.42
84	65,734	609	92.65	14	2.13
85+	281,295	2,625	93.32	82	2.92

**TABLES 6 and 6A** illustrate the distribution of motor vehicle crash and fatality involvement for the 29 and under age group and for the 70 and above age group without alcohol involvement. The data in **TABLE 6** supports the findings of **TABLE 4** in which those drivers under 25 had the highest rates of crashes. Similarly, fatality rates for drivers under 25 in **TABLE 6** closely resemble the rates cited for drivers under 25 in **TABLE 4**. Age group 70-74 shows a relatively high rate of crashes (**TABLE 6A**). The crash rate for age group 75-82 tends to drop slightly and begins to rise at 83 but drops for 84 and above.

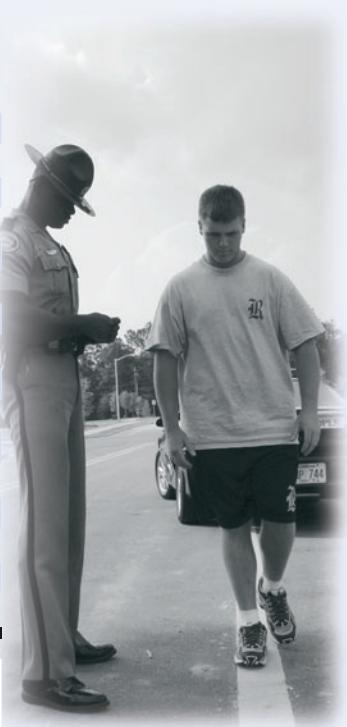

# SELECTED AGE GROUP

Does not include drivers of bicycles, mopeds, ATVs, or trains in "all crashes" and in "fatal crashes" categories on both tables.

**TABLE 7**

TABLE 7 and 7A provide data for involvement in motor vehicle crashes and fatalities for the 29 and under and the 70 and above age group with alcohol involvement. The age group 18-25 (TABLE 7) shows a relatively high rate of alcohol-related crash involvement; however, alcohol-related fatal crashes is more serious for the 19-24 age group. Compared to the age group under 30, the age group 70 and over (TABLE 7A) has a relatively low rate of alcohol-related crashes. With the exception of age groups 70-72, 74 and 76, the alcohol-related crash rates for the drivers are below 1.65 per 10,000 licensed drivers. Involvement in alcohol-related fatal crashes for the age group 70 and above remain below the rate of one per 10,000.

# DRIVER PROFILE

\*Drivers whose gender was not stated are included in the total column for all drivers.

Regarding gender and residence, a large percentage (73.2%) of drivers (male and female) killed in traffic crashes were from the county in which the crash occurred (TABLE 8). Those drivers elsewhere in the state ranked second (20%) behind those residing in the county. Only 5.4 percent of the drivers killed were non-residents of the state. Less than half of one percent of those killed in crashes were foreign drivers visiting Florida. The residences of 1.2 percent of drivers killed were unknown. Injuries followed similar distribution pattern of residence as those killed. In general, there was not much difference between males and females involved in fatal crashes. However, females had higher percentage of injury crashes (84.7% vs. 79.9%) in the categories of county of crash. Males had higher percentages of injury crashes in the categories of elsewhere in state and non-resident of state.

**TABLE 9**

## Drivers INVOLVED IN CRASHES BY AGE GROUPS\*

AGE	All Drivers	% All Drivers	Drivers Killed	% Drivers Killed	Drivers Injured	% Drivers Injured	% TOTAL

<b>TOTAL</b>	<b>371,887</b>	<b>100</b>	<b>1,913</b>	<b>100</b>	<b>152,915</b>	<b>100</b>	

\*Includes bicycle drivers.

As shown in TABLE 9 drivers 75 years of age and above account for 3.84 percent of the total number of drivers in the state, but they constitute 10.61 percent of drivers killed in traffic crashes. Drivers age 16 through 20 are more likely to be injured than killed in traffic crashes. This age group accounts for 13.48 percent of the total number of drivers injured as compared to 10.45 percent of the drivers killed. While there is a sharp increase in fatalities for the age group 21-54, the injury level of this group remains consistently higher compared to their fatality level. The fatality level versus injury level reverses for those 55 years of age and above, i.e., this age group is more likely to be killed than injured in traffic crashes.

TABLE 10 shows that males are disproportionately represented among motorcyclists (97%), bicyclists (84.3%), pedestrians (68.2%), and drivers (70.5%) killed in traffic crashes. Fatalities are equally distributed among male and female passengers. Of those killed in the above categories, a high proportion were above 20 years of age. A relatively high proportion of male motorcyclists (91.9%), bicyclists (79.5%), and pedestrians (59.5%) were among those injured in traffic crashes. However, injured drivers are equally distributed among male and female drivers. Again, the majority of motorcyclists, bicyclists, pedestrians, passengers, and drivers injured are above 20 years of age ( TABLE 11).

# CONTRIBUTING CAUSES

This table lists contributing causes reported by the investigating officer for drivers in traffic crashes. There can be up to three contributing causes per driver.

**TABLE 20**

**ACTIONS ATTRIBUTED TO DRIVERS Involved in Fatal, Injury or Property Damage Only Crashes**

**DRIVER ACTIONS**

TYPE OF CRASHES	Failed/												Mech- anical Defect	Driver Distra- tion	Other	TOTAL
	Speed Too Fast	Yield Right- of-Way	Disregard Stop Sign	Disregard Traffic Signal	Drove Left of Center	Follow Closely	Alcohol Under Influence	Careless Driving								
									Mech- anical Defect	Driver Distra- tion	Other					
Fatal	498	471	72	99	139	9	410	799	37	23	815	3,372				
% of Fatal Crashes	6.44	1.28	2.11	1.13	8.77	0.11	4.59	1.17	1.80	1.21	1.74
